

Assignment 3
Database Systems
Due: Dec. 2, by 11:59 pm
R.H.

A Team Project

Purpose: Systematic design of a database using EER data modeling.

Problem: The publisher of the book of "Glorious Savannah" wants you to analyze and design a relational database for the contents of their book given in the second assignment. They are requesting that you:

1. Use the EER model for the design of their database and
2. Systematically convert the outcome of the EER model into a set of relations

Turn in a highly organized report. That is, your report must include a

- a. Cover sheet,
- b. Table of contents,
- c. Table of figures,
- d. Introduction,
- e. Analysis and design
 - Blocking process,
 - Details for each block (as discussed in class),
 - Development of the entire EER diagram along with all the constraints and reasoning,
 - Conversion of the EER model into a set of relations (using the algorithm given in the class and make sure that whenever a rule is used for a conversion the rule number must be provided along with a copy of the rule itself.),
 - Table of attributes (as you have done in the 1st assignment), and
 - Final list of relation schemas.
